

CDR Pro Tool Kit

Market: USA & Canada

Thank you for your purchase of the CDR Pro Tool Kit. This kit includes all current available hardware for DLC vehicle imaging.

It does not include any of the cables or adapters required for direct-to-module (D2M) vehicle imaging - all direct-to-module cables and adapters can be purchased separately on the Crash Data Group website at www.crashdatagroup.com

Included in your CDR Pro Tool Kit you will find:

CDR Interface Module
F00K108954

DLC Adapter 1 (yellow)
F00K108709

DLC Adapter 2 (black)
F00K108784

DLC Adapter 3 (gray)
1699200369

DLC OBDII Cable
F00K108287

USB-to-Serial Adapter Cable
F00K108953

Deluxe Re-powering Kit
CDR-BP

CDR 900 Upgrade Kit

CDR 900 Interface Module
1699200598

OBD/DLC Cable
1699200615

CDR 900 Power Cable
1699200602

Wireless Dongle (2)
1699200155

D2M Cable Adapter
1699200616

CDR 900 Extension Cable
1699200617

CDR 900 USB Cable
1699200385

CDR 900 Quick Start
Yellow Paper Insert

Other Accessories

Custom hard shell case
CASE/NITRO/CDR

Cigarette Lighter Adapter
03001070

AC Power Supply+Cord (actual
product picture may vary)
F00E900104

Additional information and Video Tutorials

For additional information on training, USB-to-Serial drivers, help forums, warranty, and video tutorials please visit the Crash Data Group website:

Getting Started

1. Unpack your CDR Pro Tool Kit and check contents.
2. Install the current version of the Bosch CDR software. The software and user manual are available as a digital download from the Crash Data Group website.
3. Activate your software. You will receive an email from Bosch with an attached .CTF file and instructions for activation.
4. Open the CDR software and review the CDR Help File. **Help > Bosch CDR Help**

The CDR Help File includes a comprehensive getting started guide and tutorial for first time users. It also includes Vehicle & Cable Look Up, Collecting Data, Using Collected Data, Software Menu Selection & Toolbars and a Glossary of terms. The Help File is an indispensable tool for the CDR user.

5. Install the USB-to-Serial driver program. The link to the most current version is located in the Help File - simply search for "USB".
6. Practice! If your car or a friends car is supported (check the Help File), try using the CDR Tool on those vehicles. There might not be any crash data or recorded events, but the process is the same and will generate a CDR report.
7. The CDR Pro Kit includes a re-powering kit. This is used to "re-power" a vehicle where the electrical system has been compromised. You can view a video tutorial on the Crash Data Group website.
8. The Bosch CDR User's Manual containing information about using the CDR Tool is available for download on the Bosch Diagnostics website or Crash Data Group website.
