

BOSCH CDR 900 Quick Start Guide

CDR 900 Components

CDR 900 Setup and Registration

Your CDR 900 is compatible with CDR Version 17.8 or newer software. Before you setup your new CDR device, make sure CDR Version 17.8 or newer software is installed on your PC. Launch your CDR software and select **How to Setup and Register CDR 900** from the **Register a CDR 900 Device** option in the **Setup** menu and follow the provided onscreen instructions.

CDR 900 User Manual & Warranty Information

The CDR software and help file provide all the necessary information you need to get your CDR 900 operational. For further product information, visit www.boschdiagnostics.com and download the CDR 900 user manual. The CDR 900 User Manual can be found by clicking the *Download* tab from the following website: <https://www.boschdiagnostics.com/cdr/products/crash-data-retrieval-cdr900-upgrade-kit>

Installing the Wireless 801.11n USB Dongle

If you plan to use wireless to connect the CDR 900 to your PC, take the time now to install one of the *Wireless 802.11n USB Dongles* into your CDR 900. To do this, remove the bottom black rubber boot from your CDR 900, install the *Wireless Module* and then reinstall the boot (see figure 2). The second *Wireless USB Dongle* must be plugged into your PC. Follow the CDR 900 wireless instructions included in the CDR software *help file* to configure your CDR 900 for wireless operation.
